November 15, 2016

I am recent a computer science masters graduate specialties in Human Computer Interaction (HCI) and software Technologies from [University of Trento](#), Italy. My research was in the field of intelligent and adaptive HCI of Interactive design methodology in mobile application design and development, user study, smart mobility, intelligent and adaptive functionalities. Master's Thesis title: "[Smart Cafeteria](#)" [Adaptive and Interactive Mobile Application](#) [<http://suptaphilip.github.io/Master-Thesis/>] which was the part of [Smart Campus](#) project funded by [Trento RISE](#). My Bachelor thesis [Autonomous Robot Navigation System And Line Following Robot](#) [<http://suptaphilip.github.io/Bachelor-Thesis/>] was published by [LAP LAMBERT Academic Publishing](#) (2012-04-27). Along with I have more than two years work experience in backend web development as well as frontend development using php framework, HTML5, CSS3, jQuery and Bootstrap. I also have very good hand on software documents, user manual, research paper, and research presentation writing using Latex, markdown, Jekyll, Pandoc and Sphinx. Recently, I started work with python and R which makes me feel as real life problem solver and scientist. I am quick learner, curious and like to learn new technologies; and sometimes if I found any unknown terms to me, always googling to get basic knowledge.

Furthermore, I like research oriented works to figure out optimal solutions in efficient and structured ways. I am not telling that I am very much expert in every fields of study or writing code in every programming languages but whatever I do, try to do in best ways, try to figure out the optimal solutions which gives a best outcomes.

Now I am searching an opportunity which gives me a good environment for achieving more experiences through research due to reach my goal. I think it would be a good start of my career if I will be selected in this position. I am very much interested this position which will give me hand on work experience with cross-disciplinary team as well as research experience. Finally I will be patiently waiting for a positive reply.

Yours sincerely,

Supta Richard Philip
